Got a fleet of tried and true 9600s? It pays to keep your investment secure, up to date and generating income with this simple PCI compliant upgrade.

US kit components:

Part number: 06200-08199

- T7 EPP
- Multifunction board
- Mounting plates
- EPROM
- Secure SPED Board
- Cables

FAQ's

What is the "multifunction board"?

The Multifunction board combines the memory expansion board and the tri-port board (with speech) into one board. You will replace the current quad or tri-port board with this new multifunction board.

What is the "secure SPED board"?

The secure SPED board mounts to the back of the control panel. All cabling attaches to the secure SPED board to connect the various electrical components together.

I already have a memory expansion board—can I still use it?

Yes, the old memory expansion board can still be used. There is a jumper setting on the old board that must change, but once that is done it can be used as ad flash. Instructions on how to reconfigure the older memory board are detailed in the kit's installation guide.

Won't some end users think this looks like a skimming device?

The 9600 PCI Upgrade includes a mounting bezel with the ATMgurus name and website embossed into it, adding legitimacy to the product with a properly manufactured appearance. Additionally, the software has been modified to show the 9600 PCI Upgrade on the Welcome and PIN-entry screens.

What software version should I use?

This kit is designed to work with the latest 9600 US software.

- Color Display: Load filename: XD920080.00
Program Version: XA-9180.00
Tables Version: XT-9201.00
- Mono Display: Load filename: XD910080.00
Program Version: XA-9180.00
Tables Version: XT-9101.00

Please be aware that this hardware installation MUST precede the installation of one of the above software versions, and also that the installation of this software requires Tricom version 2.1.22.

Note also that if you are undertaking a field installation of this kit, a laptop will be necessary. Visit the partner log-in at www.triton.com for downloads.

Can I use the new software with old EPPs, like the T3 VEPP?

No, the new software only supports the new T7 EPP. For this reason, the software is not backwardly compatible.

What about tech support? Doesn't Triton charge for a 9600 call now?

Triton began charging for technical support on the 9600 in January 2009 (Tech Bulletin#09-01). This policy continues to be in effect. However, technical support will be available at no cost for customers calling in with questions that are specific to the installation of their 9600 PCI EPP upgrade.
